Grantmother

Giving small nonprofits the power of a grant-writing team.

A grant office that refuses to lie.

Anthony Cardinale · Brad Anderson · Comfortist LLC

THE PROBLEM

The money exists. The grant writer doesn't.

A small nonprofit is a founder and a cause. Finding the right funders, matching their rules, and writing a letter of inquiry is a full-time job nobody on staff has.

So the ask never gets written. And when software writes it for them, it can make the organization sound bigger than it is. One invented number can cost a founder their credibility with a funder.

THE SOLUTION

A grant office small nonprofits share.

Interviews

A voice avatar takes the founder's story and builds a fact sheet the founder corrects.

Finds

Funders whose giving history matches, cut by eligibility rules.

Drafts

The letter of inquiry and budget, from the fact sheet only.

Checks

Every sentence against what the founder actually said. Then a human signs.

Nothing is sent to a funder by the system. The founder approves, picks, and signs.

HOW IT WORKS PROPOSED ARCHITECTURE

Six agents. One human.

MASKY

Interviewer

Voice intake. Produces the fact sheet everyone is bound to.

GLASSER

Funder Scout

Foundations and program officers. Capped, cost-visible lookups.

RULES

Fit Checker

Geography, budget size, status, deadlines. Flags what a human decides.

MODEL A

Writer

Drafts LOI and proposal sections from the fact sheet and funder profile.

MODEL B VIA FLATKEY

Auditor

Different model. Tags every claim by source. Blocks the unsupported.

N8N + FLEXPRICE

Treasurer

Budget table, deadline reminders, metering and billing.

PromptQL backbone: rooms, bots over funder and budget sheets, a learning box with human approval.

Ask the W governance: the "agent does / human decides" map, shown as a page.

The founder approves the fact sheet, picks funders, approves learnings, and signs.

THE AUDITOR MOMENT

SHOWN IN THE FILM · PIPELINE PROPOSED

"Our program serves ~~2,000~~ students."

UNSUPPORTED **The intake said 600.**

The Writer drafted it. The Auditor, on a different model, could not trace it to the interview, so the draft is blocked until the founder fixes the number. The checker can still miss errors; the human still signs.

WHAT RUNS TODAY LIVE

A Masky avatar runs the intake.

1. The Masky avatar asks three questions in its own voice.
2. The founder answers by voice (or types).
3. Name, nonprofit, and purpose fill a live fact sheet.
4. The avatar closes, and the Grantmother film plays.

Running: Masky API avatar and conversation, browser speech capture, live fact sheet, the film.

Designed: sponsor roles and the six-agent pipeline on the previous slides.

Not yet built: Funder Scout, Fit Checker, Writer, Auditor, Treasurer. The film shows how they would work.

SPONSORS AND ROLES

Every sponsor has a job.

CORE: IN THE PRODUCT PATH · Masky is live today; the rest are designed roles

Masky

Live: the Interviewer's face and voice.

promptql

Backbone: rooms, bots, learning box.

Glasser

Funder Scout: foundations and program officers.

Flatkey

Writer and Auditor on different models, one key.

n8n

Deadline calendar, reminders, sheet sync.

flexprice

Funder-match meter and success tier.

Ask the W

Governance: agent does / human decides.

7 core roles.
4 build roles below.

BUILD: HOW IT GETS SHIPPED

snyk

Code scan and Agent Scan.

prelint

PRs vs a "no fabricated facts" spec.

tenki by Luxor

Sandbox and CI.

CelestoAI

Sandbox for the Funder Scout.

BUSINESS MODEL PROPOSED

Pay when it's worth it.

Per match

Credits per matched funder, metered so the founder sees the cost of every lookup.

On award

A success tier when a grant is won, so the office shares the outcome.

Sliding

A sliding scale so the smallest organizations can afford a grant office.

No pricing has been tested with customers yet. Billing would be metered through Flexprice.

WHAT'S NEXT

From intake to signed letter.

1. Writer and Auditor on two providers through Flatkey, with the source-tag rule that blocks unsupported claims.
2. Funder Scout on Glasser with a hard spend cap, plus the Fit Checker's eligibility rules.
3. PromptQL rooms and the human-approved learning box; n8n reminders; Flexprice metering in Stripe test mode.
4. A first pilot with one small nonprofit, with its permission.

THANK YOU

A grant office that refuses to lie.
